

Polynomial Writeup

Project Goals

The object of this project was to create a library of functions that the user could use to manipulate polynomials.

Challenges/Successes

The biggest challenge, Math. I could barely remember what a polynomial was. After brushing up on it with some YouTube videos I was good to go. The biggest success was probably how easy it was to walk through a poly chain by just calling the function recursively. It was new and fun and really helped cut down on code.

Lessons Learned

1. Polynomials
2. Recursive functions

Conclusion

This program was a fun program to make. It refreshed me on my polynomials and helped me learn more about recursive functions and linked lists in C.
